Support	Description
Reconnaissance/assessment flights	Fully capable with organic resources to provide IFSAR high-altitude reconnaissance, mid-level orthoimagery and topo Lidar and low-level hi-res imagery with topo and bathy Lidar.
Assessment using satellite imagery, including satellite-derived bathymetry	Global licence agreement with Digital Globe allows cost-effective imagery acquisition. Teaming with EoMap delivers world-class satellite imagery products using same data; imagery analysis through multiple organic assets.
Deployable survey teams	24/7/365 regional capability to deliver terrestrial, afloat and airborne survey crews either as independent units or to augment other teams. Ditto equipment. Global deployability.
Production of interim-ENC	Organic capability through several Fugro Survey offices globally.
Preparation of situational awareness maps	Thematic mapping to client's requirements using own or provided data is a regular deliverable.
Other	Provision of technical, equipment specific or academic training and education, either local, online distance-learning or residential available in hydrographic and general surveying subjects. Wider Fugro provisions for geophysical/geotechnical/geoconsulting services also available regionally for both land and marine domains. www.fugro.com
